The position of pharmacists in Serbia has changed through periods of learning a professional role, complete professionalization and deprofessionalization. Solemn ceremony during faculty enrollment is important strategy for creating a sense of connection with the profession and strengthening its identity, as well as professional socialization of pharmacists (1). The aim of this research is to examine attitudes of students and alumni regarding the position of pharmaceutical profession in society. A cross-sectional study design with purpose-built questionnaire was used. Data were over a period of three months. 409 subjects participated, of which 140 were alumni, predominantly female (84.8%). Most respondents (86.8%) answered that pharmaceutical profession is not sufficiently valued in society or by other medical professions (79.2%) and the importance of pharmacists for patient healthcare is not sufficiently recognized (76.8%). The majority of respondents believe that public and other healthcare professionals do not recognize the knowledge of pharmacists for optimization of therapeutic outcomes (86%, 76.3% respectively). Introducing a solemn ceremony for students at admission, and taking the oath after studies was supported by 66.2% and 84.1% respondents, respectively, in response to growing challenges of deprofessionalization. Poor social status perception of pharmacy has been recognized together with importance of maintaining a professional environment at the faculty. Pharmacy students cannot become professionals immediately after receiving university degree or license to work. In order to become professionals, during their studies students need to recognize and become professionally sensitive to all the factors that make pharmacy specific, and set it apart from other healthcare professions.

STAVOVI STUDENATA FARMACIJE I ALUMNIJA FARMACEUTSKOG FAKULTETA U VEZI SA POLOŽAJEM FARMACEUTSKE STRUKE U DRUŠTVU

Položaj farmaceuta u društvu se u Srbiji menjao kroz periode učenja profesionalne uloge, potpune profesionlizacije i deprofesionalizacije. Svečana ceremonija prilikom upisa na fakultet predstavlja važnu strategiju za stvaranje osećaja povezanosti sa profesijom i ojačanje profesionalnog identiteta, kao i profesionalnu socijalizaciju farmaceuta (1). Cilj istraživanja jeste ispitivanje stavova studenata i alumnija u vezi sa položajem farmaceutske struke u društvu. Korišćena je metoda studije preseka sa namenski kreiranim upitnikom, kojim su podaci prikupljani tokom tri meseca. Učestvovalo je 409 ispitanika, od čega 140 alumnija, dominantno ženskog pola (84,8%). Većina ispitanika (86,8%) mišljenja je da farmaceutska struka nije dovoljno cenjena u društvu, niti je cenjena od strane drugih medicinskih struka (79,2%), te ni značaj farmaceuta i doprinos njihovog rada u zdravstvenom zbrinjavanju pacijenata nisu dovoljno prepoznati (76,8%). Većina ispitanika smatra da građani i drugi zdravstveni radnici ne propoznaju znanje koje farmaceuti imaju i koje mogu da pruže u optimizaciji terapijskih ishoda (86%, 76,3% redom). Uvođenje svečane ceremonije kod prijema studenata na početku studija i polaganje zakletve na kraju studija, podržalo je 66,2% ispitanika u prvom, odnosno 84,1% u drugom slučaju, kao odgovor na rastuće izazove deprofesionalizacije. Rezultati ukazuju da je loša percepcija društvenog statusa apotekarske profesije prepoznata i da je prepoznat značaj podsticanja profesionalnog okruženja na fakultetu. Studenti farmacije ne mogu da postani profesionalci onog trenutka kada dobiju fakultetsku diplomu ili licencu za rad u zdravstvu, već je potrebno da tokom studija prepoznaju i postaju profesionalno senzitivni za sve one identitete koji čine apotekarsku profesiju specifičnom i izdvajaju je od ostalih zdravstvenih profesija.
