

INDEXING

Starting from 2006th, only three years since the launch of the journal *Istraživanja i projektovanja za privredu* (Journal of Applied Engineering Science), all published articles are indexed in international **ELSEVIER database** through **SCOPUS** service. In this way, the work and results of the local scientists are widely available as the **SCOPUS** is the largest database of abstracts and citations in terms of scientific publications and quality web sources which, above all, give the results of research in various fields. This database provides excellent information necessary for further work and scientists training with extensive search capabilities.

The screenshot shows the Scopus search results interface. At the top, there are navigation links for SciVerse and Scopus. Below that, a search bar and navigation menu are visible. The main content area displays search results for 8 documents. The results are listed in a table with columns for Document title, Author(s), Date, Source title, and Citations. The first three results are visible:

Document title	Author(s)	Date	Source title	Citations
